Investment Objective & Policy

The Fund aims to provide income with the potential to grow the amount you invested over the medium term.

The Fund invests at least two-thirds of its assets in investment grade bonds (which are similar to a loan and pay a fixed or variable interest rate) priced in Euros and issued by companies in Europe, including the UK, or companies that have significant operations there. Bonds rated as investment grade, as defined by international agencies that provide such ratings, are considered safer than lower rated bonds but typically pay a lower income.

The Fund may use derivatives (complex instruments) for hedging purposes and may also invest in asset classes and instruments different from those stated above.

The Fund is actively managed in reference to the iBoxx Euro Corporate Bond Index. The index is broadly representative of the securities in which the Fund invests, and provides a suitable target benchmark against which Fund performance will be measured and evaluated over time. The fund manager has discretion to select investments with weightings different to the index, and that are not in the index, and the Fund may display significant divergence from the index.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- The Fund holds assets which could prove difficult to sell. The Fund may have to lower the selling price, sell other investments or forego more appealing investment opportunities.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund may invest in derivatives with the aim of reducing risk or minimising the cost of transactions. Such derivative transactions may benefit or negatively affect the performance of the Fund. The Manager does not intend that such use of derivatives will affect the overall risk profile of the Fund.
- Most bond and cash funds offer limited capital growth potential and an income that is not linked to inflation. Inflation is likely to affect the value of capital and income over time.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Investment Approach

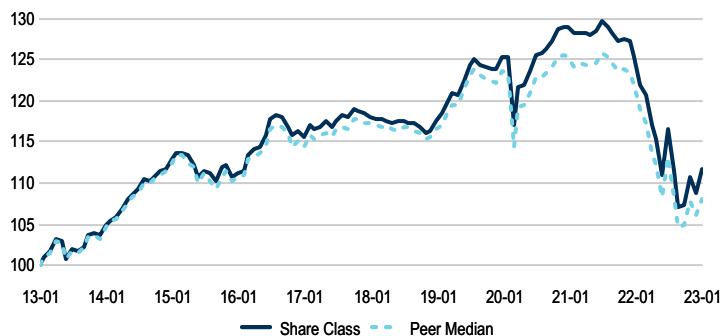

The fund's investment approach is built around robust credit research, portfolio construction and risk management. Issuer and security selection is driven by a credit research process that surveys the global opportunity set to select those investments that offer the best risk-adjusted returns.

Analysis is performed by a team of experienced analysts who develop independent, fundamental views of the industries and companies they focus upon and their credit quality.

Performance

Past Performance does not predict future returns. The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.

10 Years NAV (EUR)

Performance Extension

The past performance information for the period prior to 21 September 2018 is from the Threadneedle European Corporate Bond (Class 1 Gross Accumulation Shares (EUR) GB00B1FQYB82) (a UK authorised UCITS fund launched on 22 October 2002), which merged into this Fund on 22 September 2018. The past performance calculated before 21 September 2018 includes UK taxes but does not include Luxembourg taxes.

Source Morningstar UK Limited © 2023 as at 23-01-31. Net Fund returns - Based on the NAV and assuming income is reinvested including ongoing charges excluding entry and exit charges. Index returns include capital gains and assume reinvestment of any income. The index does not include fees or charges and you cannot invest directly in it.

The Morningstar Categories for funds in the Europe/Asia/Africa universe include funds domiciled in Europe and/or traded on European Markets. Morningstar regularly reviews the category structure and the funds within each category to ensure that the system meets the needs of investors and keeps pace with market developments. The performance shown includes Open End Funds and Exchange Traded Funds only and is filtered by Primary Share Class in Morningstar Offshore Territories Classification.

Gross Fund returns - Source Columbia Threadneedle as at 23-01-31. Gross of fee portfolio returns are time-weighted rates of return net of commissions, transaction costs and non-reclaimable taxes on dividends, interest, and capital gains using pricing of investments which is either the last traded price or a bid basis. Cash flows are factored as of the end of the day and exclude entry and exit charges.

Columbia Threadneedle ESG Materiality (ESGM) rating

Columbia Threadneedle ESGM ratings cover over 8,000 global companies. They give an initial, evidence-based assessment of a company, showing how sustainably it is run and how effectively it manages ESG exposures. Our ESG Materiality model is built upon the Sustainability and Accounting Standards Board (SASB®) framework, which in turn identifies material ESG risk factors for 77 industries. This model processes published data for the companies covered and assesses the management approach to ESG exposures and related operating practice standards. We rate issuers from 1 to 5. Issuers rated 1 are those of best quality whereas issuers rated 5 are weakest. We update our ratings daily and changes in an issuer's rating can provide a momentum signal for portfolio managers.

Carbon Intensity

This measures carbon emissions relative to the size of a company, measured by revenues not market capitalisation. The measure used is tonnes of CO2 emitted (tCO2e) per \$1M of revenues. We give data for the overall Fund based on the weightings of the securities held, and a comparison with similar data for the Index. Carbon intensity provides an indication of carbon efficiency. This measure enables comparison with other funds and asset classes.

Controversies Exposure

We assess exposure to controversies using three international frameworks covering standards of operating practice: the UN Global Compact; the International Labour Organisation Core Labour Standards; and the UN Guiding Principles on Business and Human Rights. We measure the proportion of the Fund associated with breaches of the three frameworks and give a comparison with similar data for the index.

MSCI ESG Score

The MSCI score assesses effectiveness at managing ESG exposure. If the Fund score is above the Index, the Fund is overweight in companies that manage their ESG exposures better than others.

Tilt

The "Tilt" figure shows the bias of the Fund relative to the Index. It is expressed as the arithmetic difference in the weighting. A positive tilt indicates a bias towards a "better" RI profile than the Index.

Measures are being used to compare the ESG characteristics of the fund against the Index. This index also provides a helpful benchmark against which the financial performance can be compared. Accordingly, the index is not designed to specifically consider environmental or social characteristics.

For more information on Responsible Investment (RI) or investment terms used in this document, please see the Glossary published in the Document Centre on our website: <https://www.columbiathreadneedle.se/en/retl/about-us/responsible-investment/>. The decision to invest in the promoted Fund should also take into account all the characteristics or objectives of the promoted Fund as described in its prospectus/ in the information which is to be disclosed to investors in accordance with Article 23 of Directive 2011/61/EU.

The ESG materiality and carbon intensity scores are calculated on a trailing 12-month weighted average. For periods less than 12 months the rolling average will be calculated using the months available. Weighted average is computed using an equal weighting of the metric for each of the business days contained in the prior 12-month period. The carbon intensity denominator "sales" figure is a revenue measure. Coverage is the portfolio's percent of market value consisting of holdings for each applicable metric. Cash and derivatives are excluded from coverage. MSCI gives issuers a score of "Pass", "Watch List", or "Fail" depending on the degree to which they measure against principles in three documents: The UN Global Compact, the International Labor Organization Core Labour Standards, and the UN Principles on Business and Human Rights. An assignment of "Fail" for any of the three causes the holdings to reflect as controversial.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 22-03-31. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.
